The FCC Integrated Surface Hourly Database, A New Resource for Global Climate Data

Why Bother ??

- Multiple data sources difficult to use
- -- Differing formats
- -- Differing time conventions (LST, GMT)
- -- Differing station numbering systems
- Need to make servicing more efficient
- Need for additional quality control

Project Phases

- Proposal and funding
- Research and preparatory
- Programming
- Data processing
- Quality control phases 1, 2, and 3
- Cdrom product
- Online implementation

Proposal and Funding

- ESDIM and OGP
- Federal Climate Complex datasets
- -- NCDC US surface hourly
- -- USAF global surface hourly & synoptic
- -- NCDC US hourly precipitation
- Full period of digital record
- "Merge" into one global database

Research and Preparatory

- Detailed project plan
- LST \rightarrow GMT research
- Metadata prep
- FCC coordination

Programming

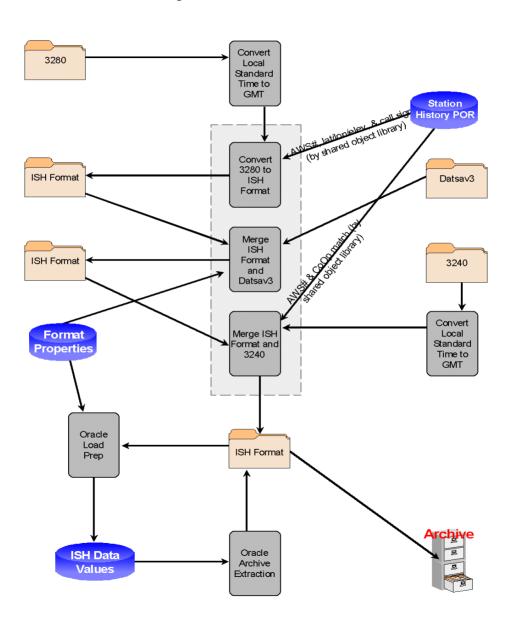

- Time conversions (ISH in GMT time)
- Format conversions
- Station history preparation
- Data merging
- Inventories

Data Processing

- Time and format conversions
- Merging where applicable
- Produce full period of record archive
- Inventories and inventory comparison

Integrated Surface Hourly Dataset

Initial Population Process Flow

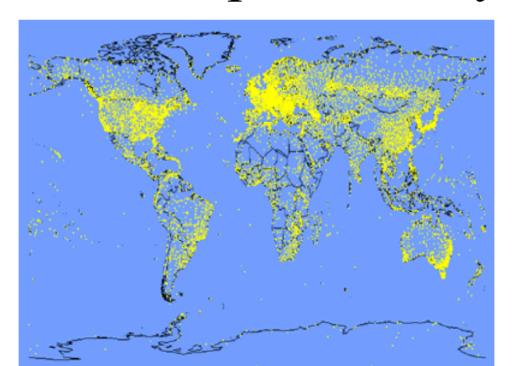

Quality Control

- Phase 1 selected reprocessing
- Phase 2 program and process QC algorithms to correct random and systematic errors in the data
- Phase 3 additional QC homogeneity checks, spatial checks, etc -- unfunded

The Results....

~ 20,000 stations historically As early as 1900 to present Version 1 completed late 2000 Version 2 completed early 2002

CDROM Product

- ISH data for 1995-2000 period
- Data selection via map interface
- Approximately 10,000 stations

Online Implementation

- Data modeling for relational database
- Integrate data into NNDC CDO system
- Programming to select data temporally and spatially (by region, country, state, etc)
- Implement initially for most recent data
- Implement later for full period of record
- Additional hardware requirements

Future Plans

- Additional datasets merged into ISH
- Additional quality control
- Additional metadata/station histories
- Additional scientific studies and use of the data
